Quest for Excellence

Introduction

Subtitle: Real-Time Tracking | Inventory Accuracy | Operational Efficiency |
Optimize Stock | Reduce Waste | Improve Operations

Introduction

Tracking, monitoring, and maintaining physical assets of an organization.
Helps reduce costs, prevent stock outs, and improve customer satisfaction.

Real Time Common Challenges

- Manual inventory errors
- Asset misplacement or theft
- Inaccurate reporting
- Inefficient audits
- Time-consuming tracking processes
- Stock outs and overstocking
- Inaccurate stock levels
- High labour cost
- Difficulty in demand forecasting
- Poor visibility across warehouses

Components

- RFID Tags (Passive/Active)
- RFID Readers
- Middleware/Software
- Barcode Tag
- Barcode Reader

Work flow

Tagging: Each asset is tagged with an RFID/Barcode chip

Scanning: Readers detect and capture asset data

Data Processing: Data is sent to central software

Monitoring: Live dashboard shows location, status, usage

Reporting: Automated reports and alerts

Inventory Management with RFID

Solution Overview

- Real-time asset visibility and audit trail
- Auto check-in/check-out of tools, machinery, IT assets, etc.
- Maintenance history tracking
- Depreciation tracking and inventory control
- Fixed asset tagging with handheld reader integration
- Automated check-in/check-out
- Stock-level monitoring and reordering alert
- Integration with ERP or warehouse systems
- Location-based live tracking of assets, vehicles, inventory, or personnel
- Dashboards with visual mapping and alert system

System Architecture:-

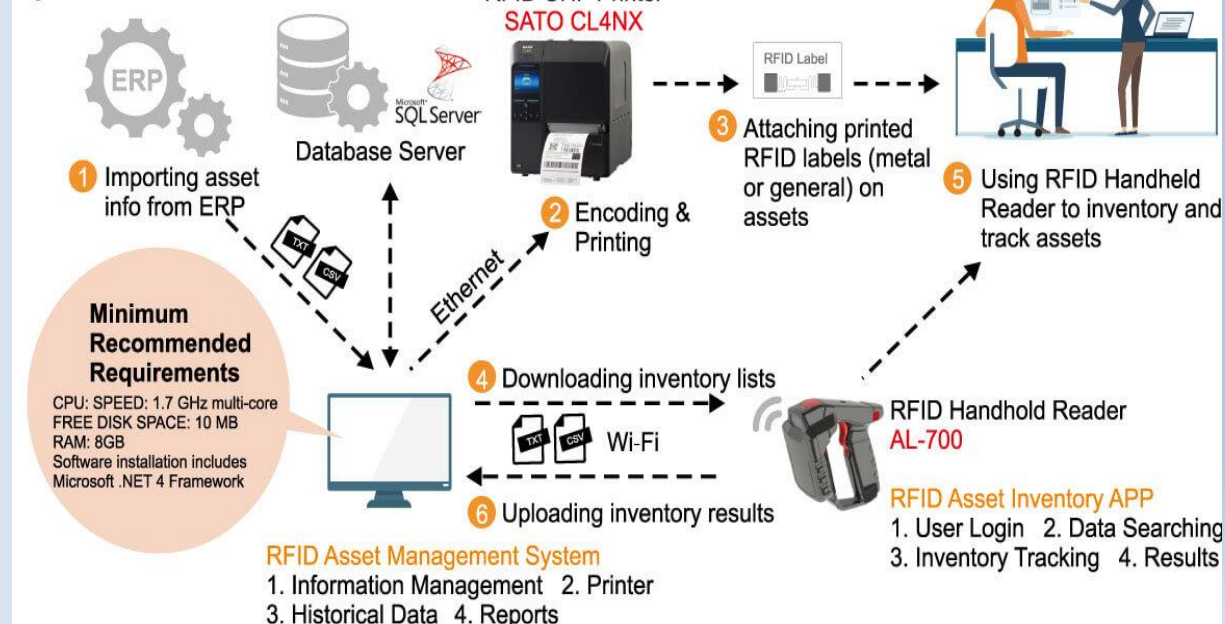

- RFID Tags → RFID Readers → Middleware → Backend Server → Web Dashboard / Mobile App
- Barcode Tags → Barcode Readers → Middleware → Backend Server → Web Dashboard / Mobile App

Use Cases

- IT & Office Equipment Tracking
- Hospital Equipment Monitoring
- Manufacturing Tools & Machinery
- Construction Site Tools
- Libraries & Document Archives
- Warehouses & Logistics
- FMCG / Grocery Chain

System Flowchart

RFID Assets Management Solution

- Customizable tag encoding
- Scalable infrastructure
- Cloud-based or on-premise hosting
- Role-based access and multi-location support
- Alerts, analytics, and reports

Deployment & Planning

- Site survey & tag planning
- Hardware procurement
- Software installation
- Training & support
- AMC & upgrades

Commercial Proposal (Optional)

- Hardware Cost
- Software License
- Training & Support
- Optional Add-ons (Mobile App, GPS, etc.)

Key Features

- | | |
|------------------------------|--|
| • Inventory Tracking – | Real-time updates for incoming/outgoing stock |
| • Automated Reorder Points – | Avoid stock outs with minimum threshold alerts |
| • Reports & Analytics – | Daily, weekly, monthly reports |
| • Barcode/RFID Integration – | For quick item scanning |
| • Multi-Location Support – | Centralized control across all warehouses/stores |
| • User Access Control – | Role-based dashboard |
| • Mobile App – | On-the-go tracking and approvals |

System Architecture

- Frontend: Web + Mobile Interface
- Backend: Database (MySQL/PostgreSQL)
- Integrations: ERP, Accounting Systems
- Cloud/On-Premise options

Screenshots / Demo (Optional)

- Dashboard
- Inventory listing page
- Stock movement report
- Purchase order creation

Support & Services

- Implementation & Training
- 24x7 Support
- Custom Module Development
- Annual Maintenance Contract (AMC)

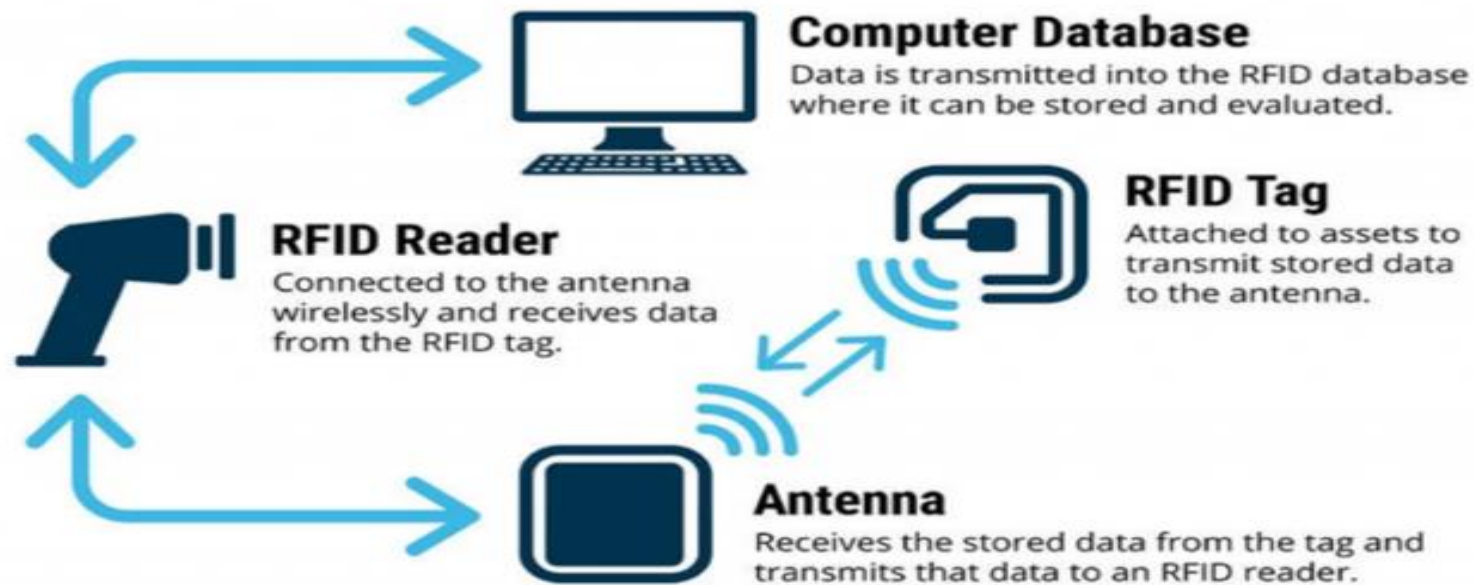

Pricing Model (Optional)

- One-time License
- Monthly/Annual Subscription
- Add-ons (Mobile App, Integrations, Advanced Reports)

How RFID Works

- 1) Tag the asset with RFID/Barcode tag
- 2) Enter asset information in database using unique serial tag number
- 3) Collect and Capture data using RFID or Barcode

Basic RFID System

Passive RFID:

- Tag requires NO battery
- Powered by RFID Reader
- Read ranges between ~ 5 - 30 feet
- Collect multiple tag data at once
 - No line of sight required
- Software makes sense of data captured
